

Connection Instructions

[Download MySQL Workbench here.](#)

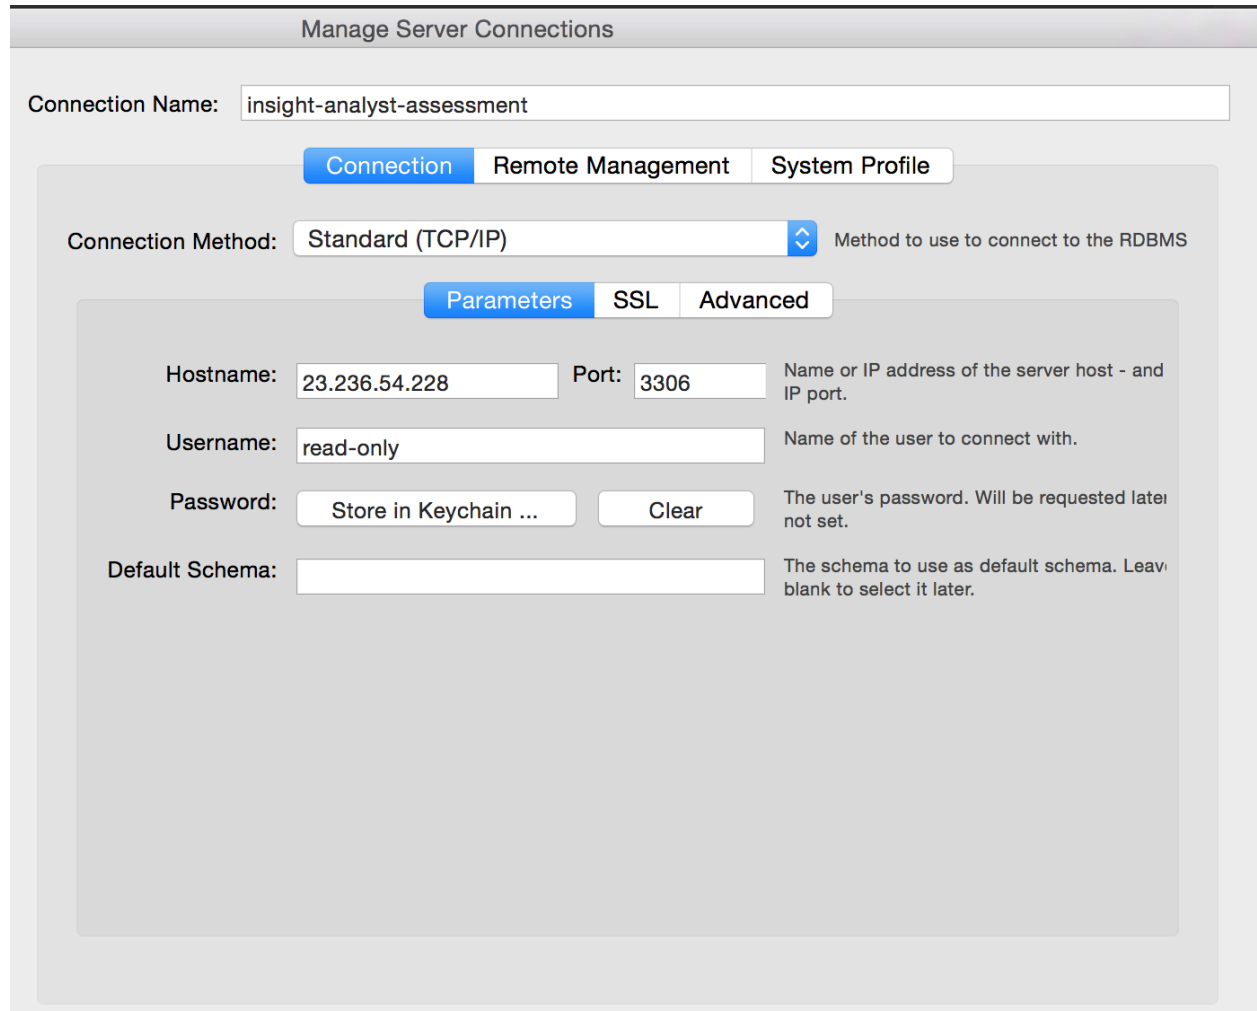

Add a new connection from this plus sign:

Enter the following info (also depicted below):

Hostname: 23.236.54.228

Username: read-only

A screenshot of the "Manage Server Connections" dialog box in MySQL Workbench. The dialog has a title bar "Manage Server Connections". Below the title bar, there is a "Connection Name" field with the value "insight-analyst-assessment". There are three tabs: "Connection" (selected), "Remote Management", and "System Profile". Under the "Connection" tab, there is a "Connection Method" dropdown menu set to "Standard (TCP/IP)". Below this, there are three sub-tabs: "Parameters" (selected), "SSL", and "Advanced". Under the "Parameters" sub-tab, there are four fields: "Hostname" (23.236.54.228), "Port" (3306), "Username" (read-only), and "Password" (with buttons "Store in Keychain ..." and "Clear"). There is also a "Default Schema" field. To the right of each field is a descriptive text: "Name or IP address of the server host - and IP port.", "Name of the user to connect with.", "The user's password. Will be requested later not set.", and "The schema to use as default schema. Leave blank to select it later."

When prompted, enter the password: nd8LkFLb5nf1IFa5
